

The following message was encrypted using the classic +13 key. Use your cipher wheel to decode the text.

AB BAR JVYY OR NOYR GB QRPBQR BHE ZRFFNTR.

Encode the following plaintext to cipher text using the key of +5.

MEET AT THE BRIDGE. COME ALONE.

The following message was encoded using an unknown key, can you decrypt?

X HDATBCAN HLTPG X PB JE ID CD VDDS.

That last problem was too easy. Here is another one that was encrypted with an unknown key but the spaces and punctuation have been removed. Drat.

I know the frequency of letters in the English language is this:

JCRRCPDPCOSCLAWAYLZCYSQCDSJAJSC

Here is the frequency analysis on the phrase.

On the back, encode a message of your choice with a key of your choice. We will try to break these messages in a moment as a class.
